

FINANCIAL COMPOSITE MANAGEMENT

Composite input and mapping – does your composite take longer than half an hour to submit? If it does chances are your mapping needs attention – particularly in multi-site locations where shared mapping provides standardisation to enable exact comparison across the group.

Composite audit – does your brand have an audit and quality program? If it does not, chances are they will be implementing one. Provision of composites is costly to the brands, they and you need to be sure the content is accurate. The all too common hiding place is “yes but my composite is not accurate” that does not help you use a valuable tool to drive your business forward.
